SPUR is a natural bioactivator based on amino acids obtained through enzymatic processes, making **SPUR** more efficient than chemical process based products. It's recommended for all crops and all times, especially when the plants need more nutrients such as in pre-blooming, setting, the swelling of the fruit, vegetative growth, for saline or climatic conditions etc.

WARNING:

The recommendations and information we provide are the result of extensive and rigorous studies and trials, however in use can involve many factors beyond our control (preparation of mixtures, application, climatology, etc.) The company guarantees the composition, formulation and content, the user will be responsible for the damages caused (lack of total or partial non-observance of the instructions on the label).
